---

Good Morning David and Mark,

Both of you have e-mailed me recently asking for recovery totals for the Bayou Teche Incident. I apologize in the delay in getting this information to you. I have been in and out of the office for the past three weeks.

The liquid recovery totals are as follows:

Crude Oil Recovery Totals		
Medium	Recovery Method	Quantity
Bayou Teche	Drum Skimmers & Marco Skimmers	184 barrels of crude oil
Land	Vacuum Truck Operations	30 barrels of crude oil
<b>Total Recovery:</b>		<b>214 barrels of crude oil</b>

With regard to disposal of solid materials, please see the roll off box disposal totals shown below through May 5, 2016. Please note that as of May 5, 2016 two roll off boxes being utilized for temporary storage of soil and/or rocks were still on site and three roll off boxes being utilized as temporary storage for absorbent material/debris/vegetation were still on site. I have reached out to AMPOL this morning for an update.

Disposal of Solids			
Type	Quantity (Roll off Boxes)	Quantity (Estimated yds <sup>3</sup> )	Disposal Location
Soil and/or Rocks	48	600	(19) to EcoServ in Morgan City (29) to Republic Services in Sorrento
Absorbent	29	725	Republic Services in

Material/Debris/Vegetation			Sorrento
----------------------------	--	--	----------

Please note that Forefront does not currently have any weight tickets generated after disposal for the aforementioned roll off boxes and that the estimated cubic yardage in this e-mail was based upon roll off box size (~ 25 yds<sup>3</sup>) for the absorbent material/debris/vegetation and the general rule of thumb when filling a roll off box with soil and/or rocks (~ 12.5 yds<sup>3</sup>). In my request to AMPOL this morning, I have respectfully asked for this documentation as well.

If you should need anything else, please do not hesitate to send me an e-mail or give me a call.

Respectfully,

Brian M. Folse
